SERVICES PTY LTD**

## **Lloyds Somers Bogie Drop Tables**

**EMS** supplies, maintains and repairs Lloyd Somers Bogie Drop Table systems.

The first requirements in any lifting system are strength and stability. That doesn't just apply to the design and operation, but also to the company that develops, manufactures, and maintains it. Lloyds Somers Bogie Drop Tables are trusted throughout the world to deliver absolute stability, absolute strength and absolute reliability - which is why so many of the worlds rail operators choose them.

Lloyds Somers Bogie Drop Table systems are designed to be extremely strong, remarkably simple to use and very very safe. All Drop Tables are designed to quickly and efficiently assist with the removal of locomotive trucks or entire wheel sets for replacement, repair, inspection or maintenance.

Drop tables can be used in maintenance facilities with in-ground tracks or elevated tracks. Body supports are used to hold the Railcar while the wheel set is removed and lowered into the maintenance pit and the Rail-bridges are movable to permit unrestricted lowering of the wheel-sets.

EMS total service, and total commitment, ensures your equipment is not just returned to original condition but brought right up to date with today's handling technology advances.

EMS have the technical back up, facilities and support services to ensure that any repair is carried out to the highest standards. If you want peace of mind have your equipment overhauled and maintained by the experts.
