Lloyds Somers Bogie Turntables

EMS supplies, maintains and repairs Lloyds Somers Bogie / Wheel Set Turntable systems, including those that are part of Drop Table systems or production line systems.

The first requirements in any heavy handling and logistics system are strength and stability. That doesn't just apply to the design and operation, but also to the company that develops, manufactures, and maintains it. Lloyds Somers Turntables are trusted throughout the world to deliver absolute stability, absolute strength and absolute reliability - which is why so many of the worlds rail operators choose them.

Lloyds Somers Turntable systems are designed to be extremely strong, remarkably simple to use and very very safe. All Turntables are designed to quickly and efficiently assist with the moving of entire locomotive trucks, Bogies or wheel sets for replacement, repair, inspection or maintenance.

The Bogie and Wheel turntables increase the flow of maintenance work within the facility reducing the handling from when they are removed from the trains to the maintenance area. The Turntable is used for redirecting the Bogies and wheels between the different work and service lines for maintenance.

EMS total service, and total commitment, ensures your equipment is not just returned to original condition but brought right up to date with today's handling technology advances.

EMS have the technical back up, facilities and support services to ensure that any repair is carried out to the highest standards. If you want peace of mind have your equipment overhauled and maintained by the experts.
